

Shop Press

Model 78050, 50 Ton Capacity

Intended Use: For straightening, bending, pressing and removal and installation of gears, bearings and bushings. This press is ideal for all automotive, heavy duty truck and heavy duty industrial workshops.

Features: ■ Norco's dual pump system allows you to quickly pump the ram to the load. The second pump allows you to work the press to maximum load capacity with easy pumping effort.
■ Safety by-pass system eliminates the possibility of over extending the ram and causing damage to the pressure cylinder.

■ Safety overload system prevents the press and its hydraulic system from being used beyond its rated capacity.

■ Press includes two 3" x 3" x 12" long bed plates.

■ Press bed can be adjusted to 8 different working heights in 5-1/2" increments. Press bed can be easily raised or lowered with the built-in winch system.

■ The hydraulic system includes a gage that measures internal pressure P.S.I. and corresponding pounds of force at the end of the ram.

■ Flash chromed hydraulic ram is self-retracting when the system pressure is released.
