

# Hydraulic Transmission Jacks

**FAST • STRONG • SAFE**

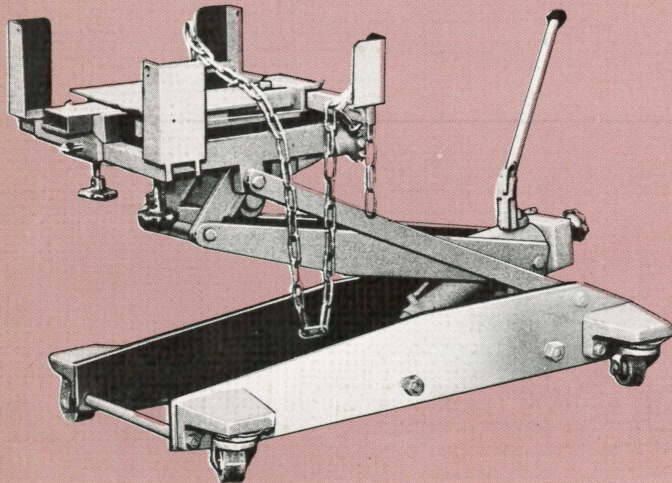

**SIMPLE TO USE**

**MODEL : YHUIJ-800A**

YHUIJ-800A type is most suitable for passenger cars with low ground clearance, since it is designed to make the overall height and the saddle height especially low.

**MINIMUM MAINTENANCE  
GUARANTEED**

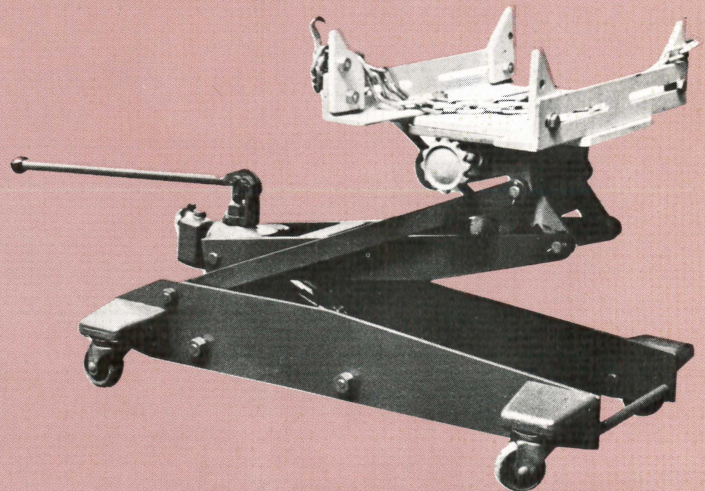

**MODEL YHUIJ-800C**

## FEATURES

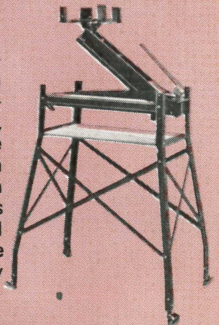

An exclusive jack designed for convenient removal and installation work of transmissions, differential gears and engines. Lifts by the manual hydraulic pump, which can be handled with utmost ease.

1. Width and tilt of the saddle can be changed according to the size and shape of missions, allowing firm clamp (YHUIJ-800A : only the angle can be changed).
2. Inclination adjustment of the saddle and handling of hydraulic release valve grip are practically designed.
3. Four big casters allow the swift travelling.
4. Extended pump handle can be easily handled from all directions.

**MODEL YHUIJ-800B**

YHUIJ STAND for all Hydraulic Transmission jacks is sturdily built to more than carry the weight of any Automatic Transmission. The stand is adjustable to 42", 44½" or 47" high, as desired. Any of these heights are convenient positions from which to work, either from two post lifts or in pits. The jack is firmly fitted into channels on the stand, giving complete safety at all times. The free-rolling creeper wheels on the stand allow the entire unit to be easily rolled into working position.
